introduction of GE's 1.7-103 wind turbine with a 103-meter rotor. This product evolution provides an increased capacity factor while increasing AEP by ~30% at 6.5 m/s.

### **GE's 1.7-103**

The rated, or nominal, wind speed is the speed at which the turbine produces power at its full capacity. For example the GE 1.5s does not generate 1.5 MW of power until the wind is blowing steadily at 27 mph or more.

3.2-3.8 platform is adaptable to a full spectrum of wind regimes. The platform includes the 3.6-137, our highest performing turbine for Class III winds. GE has employed selected legacy components with proven performance for the 3 MW platform, helping to ensure the consistent performance and reliability for which GE wind turbines are known.
