Building a System Dynamics Model is a series of papers written to demystify the model building process. This paper is the first in the series and explains the first stage of the model building process called conceptualization. The paper examines in depth the following steps of conceptualization: 1. Define the purpose of the model. 2.

The Aspen HYSYS dynamic model shares the same physical property packages as the steady state model. The dynamic model simulates the thermal, equilibrium, and reactive behavior of the chemical system in a similar manner as the steady state model. On the other hand, the dynamic model uses a different set of

Core Model Context: Dynamic Linear Model 3 If the  $\beta_j$  are constant over time,  $x_t$  is a standard AR(p) process; in this sense, the main class of traditional linear time series models is a special case of the class of DLMs.
