

a flash of light pdf

A flash is a device used in photography producing a flash of artificial light (typically 1/1000 to 1/200 of a second) at a color temperature of about 5500 K [citation needed] to help illuminate a scene. A major purpose of a flash is to illuminate a dark scene. Other uses are capturing quickly moving objects or changing the quality of light. Flash refers either to the flash of light itself or ...

Update: Check out my latest Camera Axe project for a much more robust device that handles this or my store where I sell the Camera Axe.. For those just wanting to see the pretty pictures, click here. This article focuses on making the sensors used to trigger a camera's flash using a microphone or a cheap laser pointer.

Hobby Robotics » Triggering a Camera's Flash with Sound

For best results, the LED color should be the same as the lens color. If the bulb is behind a clear lens, use the appropriate color for turn and brake light functions.
