

### **absorption heat pump technology pdf**

An absorption heat pump is an air-source heat pump driven not by electricity, but by a heat source such as solar-heated water, or geothermal-heated water. Absorption refrigerators also work on the same principle, but are not reversible and cannot serve as a heat source.

### **Absorption heat pump - Wikipedia**

A heat pump is a device that transfers heat energy from a source of heat to what is called a heat sink. Heat pumps move thermal energy in the opposite direction of spontaneous heat transfer, by absorbing heat from a cold space and releasing it to a warmer one. A heat pump uses a small amount of external power to accomplish the work of transferring energy from the heat source to the heat sink.

### **Heat pump - Wikipedia**

The type of heat pump chosen depends on the soil or rock type, land availability and if a water well can be drilled economically. They can be used in any climate but the configuration of this technology depends on local conditions.

### **Heat pumps for space heating or cooling and water heating**

A heat pump heats a house in winter and cools it in summer by moving heat from one area to another. Air-source heat pumps capture and move heat between the indoors and outdoors, while geothermal (ground-source or water-source) heat pumps capture and move heat between the indoors and the relatively constant temperatures just below the earth's surface.

Introduction. IPS (In-plane switching) is a screen technology for liquid crystal displays (LCDs). It was designed to solve the main limitations of the twisted nematic field effect (TN) matrix LCDs in the late 1980s.
