Digital image correlation and tracking is an optical method that employs tracking and image registration techniques for accurate 2D and 3D measurements of changes in images. This method is often used to measure full-field displacement and strains, and it is widely applied in many areas of science and engineering, with new applications being found all the time.

In Digital cameras vs. film, parts 1 and 2, we use the tools developed in earlier in the series to compare digital and film cameras, and we address the question, "How many pixels does a digital sensor need to outperform 35mm film?" The answer is less speculative than it used to be: The 11+ megapixel Canon EOS-1Ds, EOS-1Ds Mark II, and EOS 5D clearly outperform 35mm.
