Computational Linear Algebra for Coders Review

A prime number (or a prime) is a natural number greater than 1 that cannot be formed by multiplying two smaller natural numbers. A natural number greater than 1 that is not prime is called a composite number. For example, 5 is prime because the only ways of writing it as a product, 1×5 or 5×1 , involve 5 itself. However, 6 is composite because it is the product of two numbers (2×3) that ...

In linear algebra, linear transformations can be represented by matrices. If T is a linear transformation mapping V to V' and \hat{v}' is a column vector with entries, then $T(\hat{v}) = \hat{v}'$ for some $n \times m$ matrix A , called the transformation matrix of T . Note that A has rows and columns, whereas the transformation is from V to V' . There are alternative expressions of transformation matrices involving row vectors that are ...

PLS-regression (PLSR) is the PLS approach in its simplest, and in chemistry and technology, most used form (two-block predictive PLS). PLSR is a method for relating two data matrices, X and Y, by a linear multivariate model, but goes beyond traditional regression in that it models also the structure of X and Y. PLSR derives its usefulness from its ability to analyze data with many, noisy ...
