Minimum Design Loads for Buildings and Other Structures

In ASCE 7-10, the approach taken to determine the return periods associated with different occupancy category importance factors began with the premise that the nominal wind load, computed using the methods given in ASCE 7-05, when multiplied by the wind load factor, represents a limit state or strength load.

ASCE 7-10 Wind Provisions and Effects on Wood Design and Construction Philip Line, P.E.1 William L. Coulbourne, P.E. M.ASCE2 ABSTRACT It is well known that the major change for wind design in ASCE 7-10 Minimum Design Loads for Buildings and Other Structures is the introduction of new wind speed maps that are referred to as ultimate wind speed maps in the 2012 International Building Code (IBC).
