The use of *Bifidobacterium* spp. and/or *Lactobacillus acidophilus* in fermented or culture-containing milks became popular by the end of the 1970s as a result of the tremendous increase in knowledge encompassing the taxonomy and ecology of bifidobacteria. Their popularity has further increased owing to their reduced acidification during post-processing storage and their relatively high yield of ...

Cancer cells rewire their metabolism to promote growth, survival, proliferation, and long-term maintenance. The common feature of this altered metabolism is the increased glucose uptake and fermentation of glucose to lactate. This phenomenon is observed even in the presence of completely functioning mitochondria and, together, is known as the "Warburg Effect".

In pharmacology, the term mechanism of action (MOA) refers to the specific biochemical interaction through which a drug substance produces its pharmacological effect. A mechanism of action usually includes mention of the specific molecular targets to which the drug binds, such as an enzyme or receptor. Receptor sites have specific affinities for drugs based on the chemical structure of the ...
