The results on the analysis of L-convex function minimization algorithms are interesting on their own right and also useful in other research fields. For example, it is a common approach in computer vision to process some tasks for images by solving the minimization

### **Error minimization with global optimization for difference**

Aside from a thorough account of convex analysis and optimization, the book aims to restructure the theory of the subject, by introducing several novel unifying lines of analysis, including: A unified development of minimax theory and constrained optimization duality as special cases of duality between two simple geometrical problems.

The convex hull of  $S$ , denoted  $\text{conv}S$ , is the smallest convex set containing  $S$ , i.e. the intersection of all convex sets containing  $S$ . Similarly, the convex hull of  $g(x)$ , denoted  $\text{conv}g$ , is the greatest
