The deep learning approach is a feasible way to capture MRI image structure as dimensionality reduction. We learned the kind of subsampling strategy necessary to perform an optimal image reconstruction function after extensive effort.

Abstract: This paper presents a deep learning method for faster magnetic resonance imaging (MRI) by reducing k-space data with sub-Nyquist sampling strategies and provides a rationale for why the proposed approach works well. Uniform subsampling is used in the time-consuming phase-encoding direction to capture high-resolution image information, while permitting the image-folding problem ...
