transmission line, and the physical realization of this matching approach is quite simple. The realization of this approach with an open-wire transmission line inductor is known variously as a hairpin or Beta matching network.

Impedance Matching - UC Santa Barbara

The characteristic impedance or surge impedance (usually written Z_0) of a uniform transmission line is the ratio of the amplitudes of voltage and current of a single wave propagating along the line; that is, a wave travelling in one direction in the absence of reflections in the other direction.
